

**SUB 212 CF**

**SUB 12T**

It's not easy to obtain deep, fast and well damped bass, in fact only large woofers in big air volumes are able to do that. Aesthetics demand and small room necessity have imposed the spreading of, even floor standing, speakers of limited dimensions, getting people accustomed to long and distorted bass. Most of the subwoofers follow the same rules for the same reasons. The 212 cf and the 12T subwoofers offer great performance and good fitting to the room.

The 212CF subwoofer uses 2 high efficiency and dynamics 12" woofers in a push-pull configuration. The dimension of the drivers permits a remarkable air moving, the push-pull configuration permits to half the volume of the box with no loss of the deepest frequencies. Speed, dynamics and impact are excellent in relation to the taken up room.

The heart of the 12T sub is an absolutely exceptional 12" woofer, with an aluminium wounded 63 mm coil, 2 magnets, and a great excursion of the cone.

It can deliver impressive sound pressure, the bass is strong, fast and linear since 24 Hz. The cabinet of 35 mm, with round angles of massive walnut, carefully braced inside, is free of the typical vibrations of cheap, light chassis of commercial products, therefore the purity of the low frequencies is not smeared by unwanted resonances and the refined finishing makes it a very valuable piece of furniture.

**SPECIFICATIONS**

	<b>SUB 212CF</b>	<b>SUB 12T</b>
Power Handling	2 x 250 Watt	800 Watt
Woofers	2x30 cm	30 cm
Crossover	100 Hz	100 Hz
Impedance	4 Ohm	4 Ohm
Efficiency	92 dB spl	90 dB spl
Frequency Response	30Hz-100 Hz	24 Hz-100 Hz
Dimensions (HXWXD)cm	44X37X 37	56.5X63X63
Finishing	Black Lacquer	Walnut
System	sealed	reflex
Weight	8Kg	60 Kg
